Auser Fills Senior Engineer Post

PLEASANTON, CALIFORNIA – AUGUST 30, 2008

BSK Associates is pleased to announce that James Auser, P.E. has joined BSK as the Senior Materials Engineer for the firm's Pleasanton office. Auser is a professional materials engineer and has achieved success in both field and lab management. His immediate responsibilities include direct supervision of the materials testing laboratory and maintaining certifications. Additionally, he will be assisting the geotechnical staff with concrete mix designs, foundation designs and signing off on compaction reports.

Bringing in this level of professional engineering to BSK's Pleasanton office is in response to the different types and sizes of projects the office is now handling, including a \$600 M hospital project.

"I am very excited to be joining BSK. This will be a new challenge in my career and I look forward to meeting that challenge," said Auser.

"Jim has already hit the ground running and taken lead of two of our North Region's larger projects as well as helping his South Region team members with DSA mix design reviews," said Elizabeth Levi, BSK's Pleasanton Branch Manager.

BSK Associates is an employee-owned, professional consulting firm that offers civil and geotechnical engineering, environmental engineering, analytical chemistry, food microbiology, hydrogeology, engineering-geology, materials testing, and special inspection.
